Construction Products

## TECHNICAL SOLUTIONS

DRIZORO S.A. has a wide range of products with high performance and suitable for the repair and the restoration of concrete structures.

We provide structural or levelling repair mortars, grouts with high fluidity, screed mortars, thixotropic mortars suitable for application by manual or mechanical means, sulphate-resistant mortars and/or reinforced with synthetic fibres and corrosion inhibitors, as well as products for the treatment of reinforcing steels such as oxide converters and anti-corrosion protective coatings.

## TECHNICAL ASSISTANCE

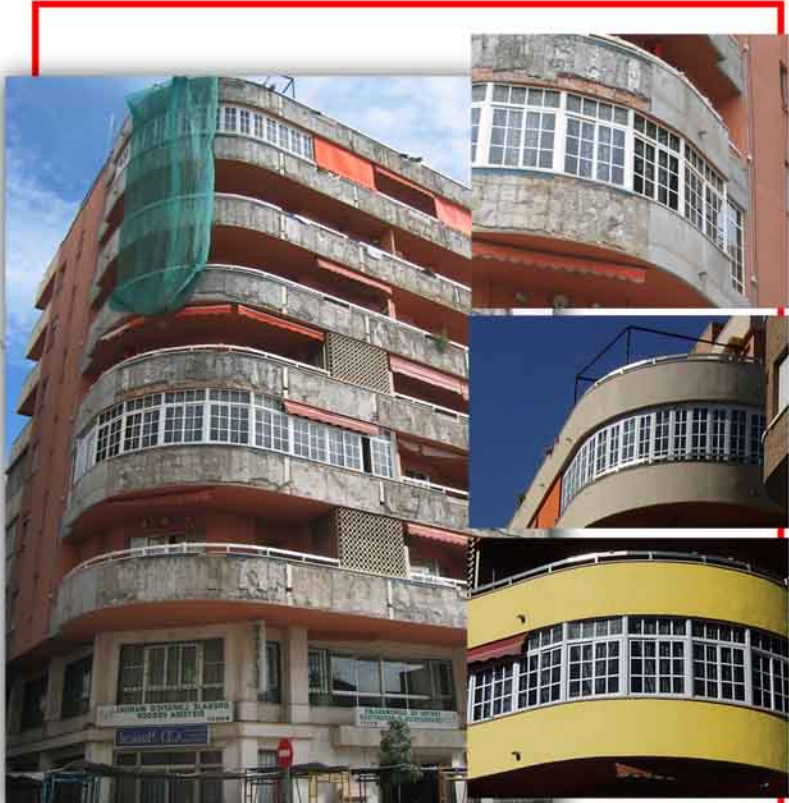

Our Sales Representatives and Technical Department composed of engineers and architects with wide experience in the building industry, gives the most professional advice depending of the type of pathology of the concrete structure. Technical assistance includes an evaluation, diagnoses and the recommendation of the most suitable system, as well as the control during the application and the result.

**STRUCTURAL REPAIR** and protection of concrete structures subjected to very aggressive environment.

**RESTORATION** of monuments, historical buildings and ornamental elements.

**RESTORATION**, repair and protection of façades and other elements with decorative finish.

**STRENGTHENING** of concrete structures with carbon-fibre technology.
